Big Data und innere Sicherheit: Grundrechtliche Rahmenbedingungen einer datenintensiven Sicherheitsarchitektur (Podcast)

In the area of internal security the purpose of averting dangers like intelligent video surveillance, predicting policing and surveillance of social media (security-related communication, profiling) are increasingly becoming the focus of attention. Those purposes of averting have potential dangers in common, like systematic and automatic surveillance and evaluation that can lead to inappropriate results, discrimination, intransparency and burden of justification. The podcast confronts these endangerments with constitutional conditions. (ah)
